

Project 2: Persuasive or Deceptive Visualization - Checkpoint Submission

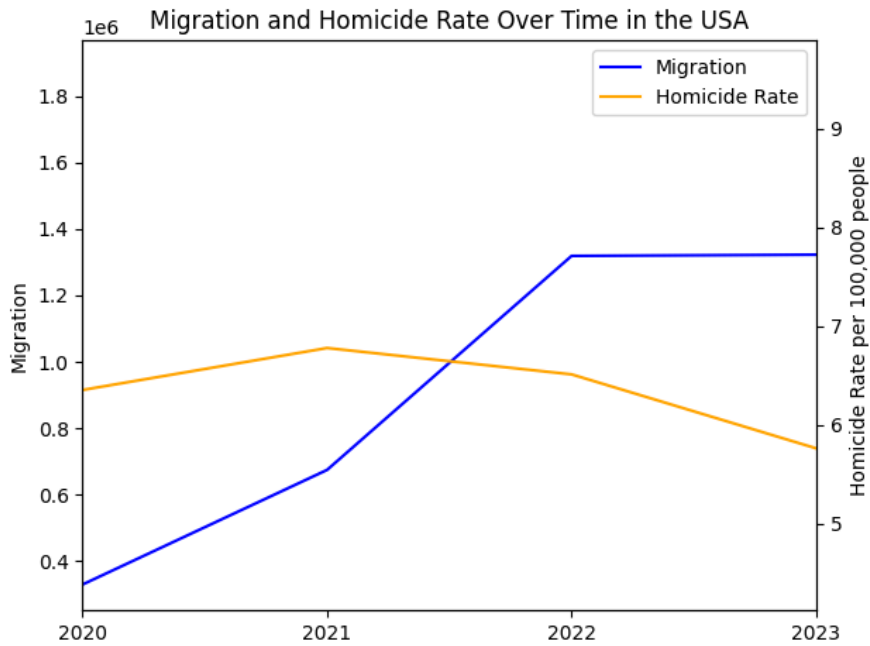

Plot 1

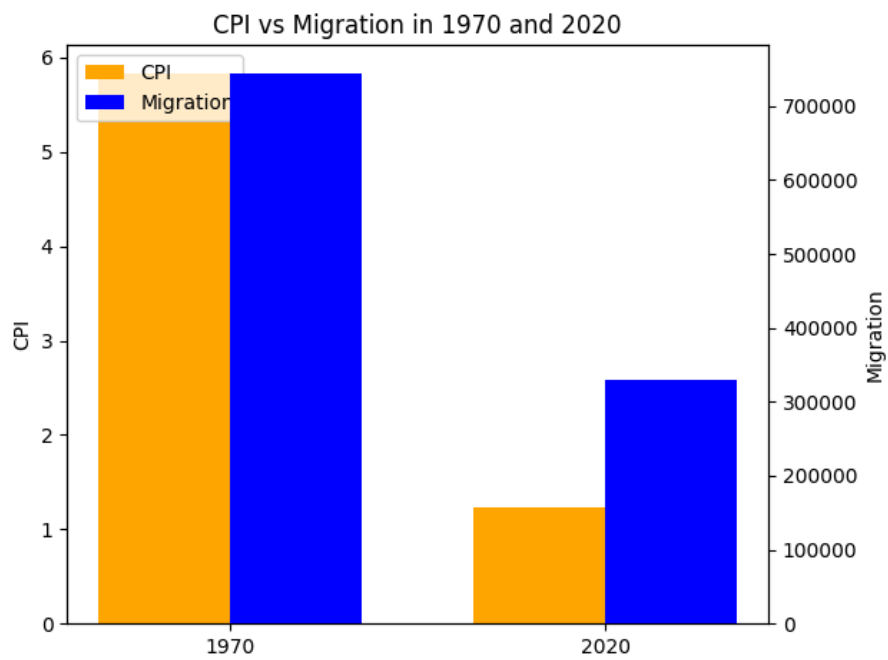

Plot 2

Plot 3

Plot 4

Page 1 Proposition: Migration in the United States has not significantly contributed to negative societal factors such as CPI and Homicide Rates

- Overall long trends show the true lack of relationship between societal factors and migration.
- Clear axis scale makes it clear that the magnitude of migration is multiples different than the per capita crime rate

Page 2 Proposition: Migration in the United States contributes to negative societal factors such as CPI and Homicide Rates

- The bar chart is very clear and very deceptive
- The line chart selects a period of time where Migration and Homicide Rate increase to substantiate the narrative that migration is a cause
- It doesn't include any trend data other than two data points specifically chosen to indicate that less migration results in lower inflation
- The simple nature of the chart makes it more convincing
- Unclear scaled axis
